

# A no hype, no equation intro to the Deekseek Reasoning Language Model

Simen Eide, AI lab

1  
2

Den kinesiske AI-satsingen DeepSeek ryster verdens teknologiaksjer.

# Why is Deepspeed a big thing?

- Comparable to openai o1 model
- Cost: \$6m vs \$100m training budget, 30x cheaper to run
- Giving the model and ideas away for free (Open vs closed)
- Chinese vs the West

Den kinesiske AI-satsingen DeepSeek ryster verdens teknologiaksjer.

# Agenda

- Product vs Model
- What are language models *really*?
- What are “reasoning language models”?
- How does language models learn?
- Discussion

Not: Stock market reaction, geopolitical effects, ...

AI model

vs

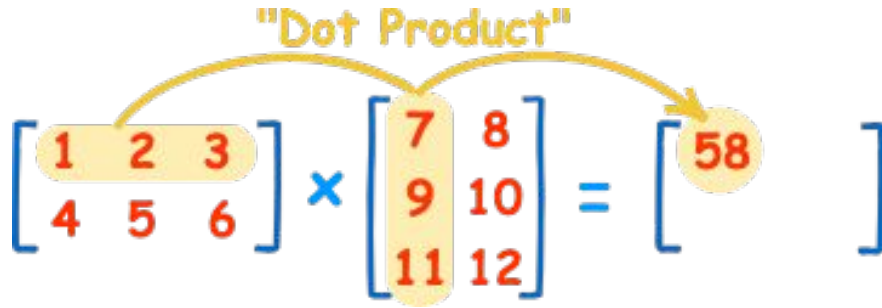

AI product

# AI model

vs

# AI product

"Dot Product"

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 \end{bmatrix}$$

**AI model:**

- Many numbers and a recipe on how to multiply these together
- Only gives probability of next word, trained from data
- AI models can be inaccurate, hallucinate, produce harmful text

# AI model

vs

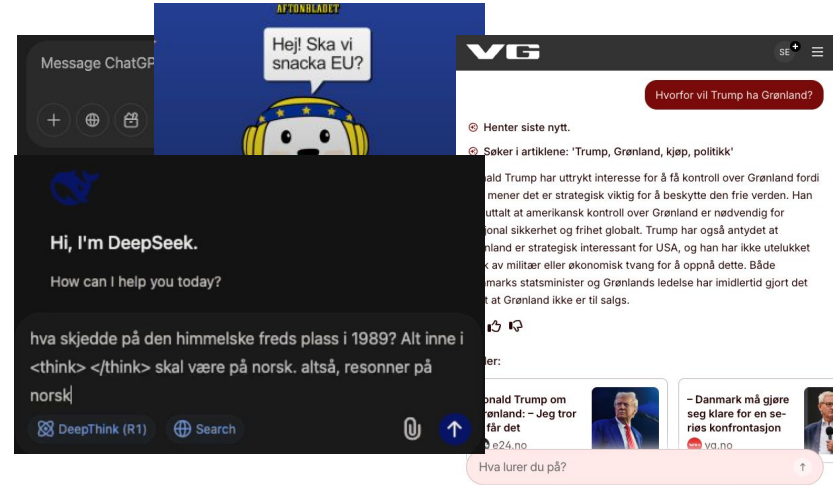

# AI product

"Dot Product"

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 \end{bmatrix}$$

## AI model:

- Many numbers and a recipe on how to multiply these together
- Only gives probability of next word, trained from data
- AI models can be inaccurate, hallucinate, produce harmful text

## AI product:

- Software that use an AI model
- Contains databases, logging, web search, ...
- AI products handles your data, and they can "steal it"

# AI model

vs

# AI product

"Dot Product"

$$\begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \end{bmatrix} \times \begin{bmatrix} 7 & 8 \\ 9 & 10 \\ 11 & 12 \end{bmatrix} = \begin{bmatrix} 58 \end{bmatrix}$$

## AI model:

- Many numbers and a recipe on how to multiply these together
- Only gives probability of next word, trained from data
- AI models can be inaccurate, hallucinate, produce harmful text

## AI product:

- Software that use an AI model
- Contains databases, logging, web search, ...
- AI products handles your data, and they can "steal it"

Humans interact with AI products

# Two layer of censorship in Deepseek

1. In the AI Product
  - a. Deepseek can do “anything”
  - b. Seems to be some keyword matching and classifier AI models
2. In the AI model
  - a. This learnt by data.
  - b. “Helpfulness and harmlessness”
  - c. Same as openAI does, but with different glasses

# What are language models?

- Language models ONLY predict the next word in a text
- Learns through example: Text data

# What is a “reasoning LLM”?

“According  
to  
deepseek”

- The model is allowed to “reason” by generating more words before giving the answer
- Only train the answer, not the reasoning
- Learn with reinforcement learning

Kan jeg slukke en elektrisk brann med vann?

Thinking... ^

Okay, the user is asking if they can put out an electrical fire with water. Hmm, I need to make sure I get this right.

First, I remember that water conducts electricity, right? So if you throw water

**Nei, det er vanligvis ikke trygt å slukke en elektrisk brann med vann. Her er grunnene og alternativene:**

# Traditional Language model training

Pretraining: Massive amounts  
text from all over the internet

*Imitation*

Instruction tune: Massive  
amounts text from all over the  
internet

*Imitation*

Alignment: Humans evaluate  
and rewrite answers to make  
them more helpful

*Reinforcement  
learning*

# Reasoning Language model training

# Traditional Language model training

Pretraining: Massive amounts of text from all over the internet

*Imitation*

Instruction tune: Massive amounts of text from all over the internet

*Imitation*

Alignment: Humans evaluate and rewrite answers to make them more helpful

*Reinforcement learning*

# Reasoning Language model training

Pretraining: Massive amounts of text from all over the internet

*Imitation*

Reason training: Work on hard problems where we can evaluate the correct answer

*Reinforcement learning*

# Imitation (supervised learning)

The

boy	<div></div>
girl	<div></div>
story	<div></div>
...	

# Imitation (supervised learning)

The

the

school

# Reinforcement learning

- Alpha-zero:
  - beat humans in go, chess and shogi
- Only learn from win or lose
- If win, make all chess moves before more likely
- “Each chess move is a reasoning word”

# Reinforcement learning

**The boy went to the**

`<think>` I need to figure out where boys usually go. The bar? No that is for older people, but maybe a school? Yes, that sounds right  
`</think>`

**school.**

# Reinforcement learning

**The boy went to the**

 `<think>` I need to figure out where boys usually go. The bar? No that is for older people, but maybe a school? Yes, that sounds right  
`</think>`

**school.** 

# Reinforcement learning

**The boy went to the**

`<think>` I need to figure out where boys usually go. The bar? Yes, that sounds good. `</think>`  
**bar.**

# Reinforcement learning

**The boy went to the**

 <think> I need to figure out where boys usually go. The bar? Yes, that sounds good. </think>

**bar.**

# Conclusions

- Deepseek is an impressive and efficient model
- Reinforcement learning a much more important part of training
- They closed the head start openAI had in language models
- They published their new research and model weights
- Hard to know exactly why this was so good, replication efforts ongoing
